

# Download MIDI files from the Internet for your Roland

1. Use any search engine ([yahoo](#), [google](#), etc.) and type in the name of the composer/artist or song title followed by the word midi. Ex. beethoven midi, amazing grace midi, jazz midi
2. Click on Search
3. Look at the list of sites that the search engine found, when you see one that looks interesting, click on it
4. Look for the list of midi files and click on the one you want:
  - Left click: your computer will either ask you if you want to download it or open it, or it will start playing the song.
  - Right click: you can "save target as"
5. Save or download the file to **3½ Floppy Drive** or **USB Memory Key**
6. Insert the **Disk** or **Key** into your Roland Digital Piano or Music Tutor

**Check our Website for a MIDI File Catalog:**

## Why Midi Files?

- MIDI files help piano students: Since a typical piano lesson occurs once weekly, the Music Tutor offers an essential between-lesson "practice partner." It interactively helps students play correct notes and rhythms, allows them to adjust tempo, and focus on "mess-up spots." This Tutor is so effective, in fact, most piano teachers want their students to use Roland Music Tutors for daily practice—because students learn faster and enjoy playing more.
- MIDI files are not just for piano. You can play drums, guitar, band & orchestra instruments, and even sing with MIDI files.
- MIDI files are a simple set of instructions telling an instrument how to play. Unlike a CD, a MIDI file allows you to change tempo, mute any track(s), display the music notation, change instrumentation, move forward and backward to any specific measure, and more.
