

How do I move MIDI files from floppy to a USB memory stick?

1. Insert your USB memory stick in to your computer
2. Open Windows Explorer or My Computer
3. Look for your USB memory stick on the file list; it is usually labeled as Drive (F:) Drive (G:), etc.
4. Create a folder on your USB memory stick and title that folder to correspond with the name of your book.
5. Copy the MIDI files from a floppy (or CD-Rom, etc) to the folder on your USB memory stick
6. Make a separate folder on the memory stick for each book that you have
7. It is a wise move to backup your memory stick to your C: Drive in case of loss or failure
