

Roland RM700 (Mahogany or Satin Black)

## What are the benefits of the RM700 over the HPI7s?

- **Piano Sounds Better:** It's impossible to put into words, as absolutely incredibly amazing as the HPI7s piano sounds, the RM700 just sounds better. The more you spend, the better they sound. The RM700 features "Grand Piano Presence II" which creates the perfect tone and the most amazing dynamic response. The speakers are same as HPI7s, but the RM700's amplification has twice the power.
- **High Resolution Touch Screen:** For exceptional ease of use; 800 x 480 (vs. 320 x 240)
- **Automatic Rhythm/Arranger:** Features 370 rhythms with backing *music styles* for playing chords in the left hand. Simply put, this is a FUN way of playing and enjoying music. As a microwave oven gives you a quick meal, the Arranger gives you quick success even with minimal music skills. Typically you use *EZ Play Music*, *Lead Sheets*, or *Chord Sheets* when using the arranger. The arranger backgrounds are like playing with a professional backup band and the RM700 has the best on the market!
- **DigiScore AutoSync:** With this incredible learning tool you can play along with a MIDI file while it is stopped and the music displayed in the screen will advance as you play the correct notes. With the touch screen, use your finger to highlight a section of music and it will instantly play that section.
- **206 Additional Sounds with many enhanced/improved Sounds:** 818 Sounds (vs. 612). Over 100 sounds are significantly enhanced (sound better). Also features the "Hammond" type of organ sound with drawbars. You can also layer 3 sounds in the right hand and 2 in the left. This allows AMAZING possibilities of sound creation. For example, you can actually sound like a fully symphony orchestra.
- **Visual Entertainment:** *Anime* creates visual pictures based on the notes you are playing. *Piano Roll* shows music on an old fashioned piano roll. *Slide Show* displays your photos (from any digital camera, or .jpg's). Karaoke lyrics and Anime can be overlay the slide show for ultimate entertainment. 68 built in classical pieces have *practice hints* that appear in the slide show mode.
- **Audio Playback & Recording:** Record WAV files to USB memory stick or CD. Add an optional CD-RW Drive to burn CD's...no computer necessary. Plays WAV and MP3 with speed control, transposition, and Center Cancel (HPI7 doesn't play MP3's nor have audio speed control)
- **Remote Control:** Control playback functions from the wireless remote control
- **Microphone Vocal Effects:** Vocal harmonizer allows you to sing into the microphone while playing and have your voice come out in 2, 3, or 4 part harmony. Voice Transformer changes your voice to a woman's, man's, kids, duck, computer, or alien.
